

Active follow-up after your vaccination

AusVaxSafety conducts surveillance of side effects after vaccination through short surveys. This helps us to make sure vaccines are performing as safely as we expect them to in real-world conditions.

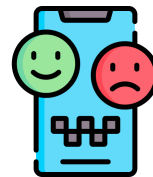

How does AusVaxSafety surveillance work?

Register to receive a survey by scanning the QR code after your vaccination

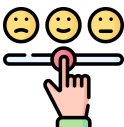

A few days later you will receive a survey by SMS or email asking about your vaccination

Complete and submit your survey to contribute to vaccine safety surveillance in Australia

Depending on your survey responses, your state/territory health department or immunisation provider may contact you to collect more details.

What happens to the information you provide?

Your responses will contribute to the national vaccine safety surveillance program that AusVaxSafety is conducting as part of Australia's comprehensive vaccine safety monitoring.

What about your personal data?

AusVaxSafety only receives responses that are *de-identified* to protect your privacy. Any information that could identify you is removed.

More information

Visit ausvaxsafety.org.au to read more about the AusVaxSafety program or to view the latest Australian vaccine safety data.

Vaccines you or your child had today

Childhood vaccines

2 months

- ☐ Infanrix Hexa
- ☐ Rotarix
- ☐ Bexsero
- ☐ Vaxelis
- ☐ Prevenar 20
